The Frequency Was Right

"We liked each other from the start": The project developers at Trockland are teaming up with several renowned architectural firms. In Berlin-Oberschöneweide, the Funkytown community quarter is being developed, with the backbone being the former editorial office building of Berliner Rundfunk. A site visit

e concrete builders have left their signatures. Letters, numbers, and, repeatedly, the year of construction,

plates disappeared beneath layers of screed and linoleum. Now, they have been uncove- but sustainable. "We always try to preserve red, freshly sandblasted, just like the walls, existing buildings," says Barbara Sellwig, columns, and ceilings made of light, grainy Senior Project Manager at Trockland. concrete

It was poured into steel mesh or assembled as prefabricated parts; in some places, The Berlin-based real estate developer Rudi

Dutschke, inscribed with the dedication "For Rudi D." Some graffiti will remain. The concrete will stay too. Cleared of all deposits and traces of neglect and vandalism, it now shows its substance.

Concrete restoration will begin soon, the next step in the complex process of a late re-

vival. For more than 30 years, the five-story reinforced concrete skeleton building with its grid facade stood abandoned, slowly decaying on a plot along Rummelsburger Landstraße in Berlin-Oberschöneweide.

A deserted colossus, overshadowed by the nearby garden colony "Am Wilhelmstrand," which had been there long before, and which has nothing to fear in the future. At its feet crouch white, bungalow-like buildings; one of them houses a recording studio, and the adjoining garden with a caravan and grill resembles a wild campsite. Nature is growing wildly around, reclaiming the decaying building conglomerate. Strolling here feels like stepping back into the 1990s, into an in-between world of chaos, emptiness, and new beginnings. The metropolis frays at its edges, with holes and gaps. That is about to change.

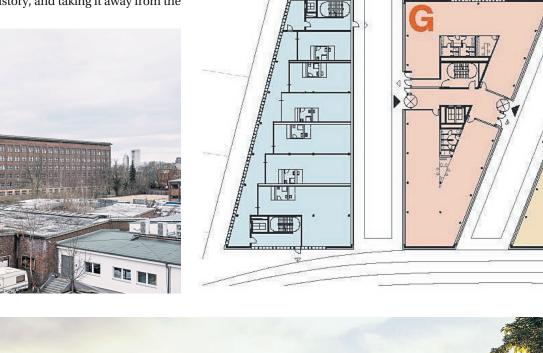

The building, stripped to its bones, was once the editorial office of the Berliner Rundfunk, which was shut down in late 1991, with more than 300 people working there. The concrete slab building has always been overshadowed by its glamorous neighbor, the Funkhaus on Nalepastraße, built in 1952 by Franz Ehrlich, a listed brick building ensemble located right on the Spree.

now privately owned. Inside, it houses one of the best recording studios in the world. The Block E-R, as the editorial building was 1964, carved into the wet known, cannot boast such advantages. Ho-

bent iron pieces protrude like loops. Faint bought the site in 2022. "The history of the light pours through the empty window ope- place helps us develop the new," says Sellnings. Graffiti repeatedly appears on the wig. "Apart from that, we would have felt long stretches of concrete walls. For exam- very uncomfortable just taking away this ple, an expressive black-and-white portrait piece of history, and taking it away from the

people who once worked here. They still come by." Block E-R is now called Block E and is the backbone of a new district: Funkytown. "Funky" from Funk, and this is not referring to the music genre, of course.

We are on the fourth floor, once the seat of the youth radio station DT64. Its closure, accompanied by fierce protests, was documented by some of the editors and presenters themselves. As witnesses to history, some of them are now in discussions with

the current owner about a place where only the shell remains, marked by protest symbols from various eras. "Fuck AfD!" is also part of it. "It's still an emotional place," says Barbara Sellwig. The former owner, Fortress Immobilien

from Düsseldorf, had different plans for the property: car dealerships, car washes, and other uses typical for historic industrial areas. But none of that came to fruition. The architectural firm KSP Engel, which was originally hired, would have been part of the package but could have been separated by Trockland, which did not happen. "We liked each other from the start," says Hannes Meisehen, architect and head of the Berlin office of KSP Engel.

Garten

Now, KSP Engel is responsible for the urban design and master planning of the new district. On the vacant lot, eight new buildings will be erected, the so-called "Stations," each designed by a different Berlin architectural firm. Trockland itself has engaged them. A few weeks ago, the "Stations" were raffled off among the invited firms under the supervision of in-house lawyers. At the end of April, they will present their facade designs: Julian Breinersdorfer, Graft Architects, Grüntuch Ernst Architects, Thomas Hillig Architects, LAVA, LXSY, Tschoban Voss Architects, and KSP Engel Berlin will be involved. The Leipzig branch of the planning and architecture firm AIP is handling the renovation of the existing building, while the Leipzig engineering office Lux is responsible for the statics. "Both have delved intensively into the construction methods of the GDR," says Barbara Sellwig.

We descend the original concrete stone staircase towards the vacant lot, which borders Rummelsburger Landstraße. Barbara Sellwig points out a covered cavity in the ground. The exit hatch of an escape tunnel that ran through Block E-R, a protective measure against attacks by the imperia-

like to work with analogies during the conceptual phase. Between the individual "Stations," there will be gaps, paths. This will also change the view of the existing building. "We cut through the block through sight axes. With this, we want to create relationships, also with the Funkhaus," says Meisehen. Planners speak

of "through movement," aiming to create connections. There is no longer an inside or

The entire area will be freely accessible. ,We reject gated communities," says Barbara Sellwig. But what will the community that inhabits Funkytown be like? There will be no apartments here, as the development plan does not allow for them. Additionally, large residential complexes have been built on the other side of Rummelsburger Landstraße in recent years. In three of the "Stations," there will be "accommodation," and this in three different forms: a hostel, a hotel, and serviced apartments for guests who stay no longer than three months. With the lively event, education, and concert activities at the nearby Funkhaus Berlin, Funkytown will not be eerily quiet in the evenings. Especially since, in the future, an electric ferry will shuttle between the landing stage at Funkhaus and the Eastside Gallery.
